

Charlotte tech firm works with Accelerance Partner in Costa Rica to create new search engine

Point of Contact:

Richard Morrell, President/CEO

Technologies:

HTML5, PHP, MySQL, CSS, Javascript

CLIENT OVERVIEW

Find.com is a Charlotte based company developing a search engine with 3 primary features; multi search, customization and transparency.

CHALLENGE:

While they have a functioning prototype, Find.com was in need features, functions and performance in order for production. When Find.com came to Accelerance they needed a cost effective, full time software development partner for a long term engagement. Find.com intended to add mobile for iOS/Android to their existing tech stack (HTML5, PHP, MySQL, CSS, Javascript) and work with a team that had search engine experience.

RESULTS:

Find.com selected an Accelerance Partner in Costa Rica with experience in HTML5, PHP, MySQL, CSS, JavaScript, mobile for iOS/Android. Find.com and their selected partner were able to adjust the initial prototype to match a new design/functionality, migrate to an AWS system, create a new Electron-based prototype and determine the implementation of additional feature development.

"The full-suite of Coaching services from Accelerance were key to our software outsourcing success. I would recommend their modules of Discovery, Plan, Connect, Align, Embark and Optimize to anyone outsourcing development."

- Richard Morrell, President/CEO, Find.com
